

VideoNet™

HD Cloud-Based
Video Conference Service

"Experience the benefits of having your own video conferencing system on your desktop or laptop computer.

Plus, with a set monthly fee for unlimited use, there are no costly surprises, and can easily be incorporated into your monthly communication budget, thanks to Asnet Technologies' high definition VideoNet™ Desktop."

VideoNet™ Desktop

- Convert your computer into a video conferencing system
- Collaborate across any network
- Connect to any other VC device
- Share and receive content
- Increased collaboration

Immediate implementation for a simple contracted fee, based on an initial 12 month term.

VideoNet™ Desktop

VideoNet™ provides the complete environment for your video conferencing solution, using Asnet Technologies' Polycom Service Provider, cloud-based video conferencing bridging infrastructure.

VideoNet™ by Asnet Technologies is a fully integrated, high definition capable video conferencing solution that is simple to use, easy to implement, scalable and affordable.

VideoNet™ provides a complete solution, with a choice of video conference systems and software to suit your purposes and requirements.

A bundled service, for one simple monthly fee

VideoNet™ Desktop is an easy to use solution that converts your computer into a video conferencing system.

- Convert your desktop or laptop computer into a video conferencing system.
- Collaborate across any network, protocol, application or device.
- Share and receive content.
- Cost effective communication, timely decision-making and increased collaboration.
- Greater time efficiency with the ability to attend meetings in-house.
- Sizeable reduction in travel costs with significant productivity increase potential.
- Addresses many company carbon footprint and environmental concerns.

VideoNet™ Desktop Features

A directory service is provisioned to each registered VideoNet™ Desktop showing all of your registered VideoNet endpoints, users and Virtual Meeting Rooms (VMR).

All endpoints registered to VideoNet™ can dial each other directly (point-to-point) or meet in the VMR (virtual meeting room).

This is an on net service; which means that point-to-point calls can be supported between all the customer's VideoNet™ users that are registered with this cloud service. Conferences with other parties will have their conference in the designated VMR provided with this service.

VideoNet™ Desktop Implementation:

Content Sharing

Share your content with other meeting participants. Share documents, webpages or your desktop directly to your Virtual Meeting Room for all participants to view.

Polycom RealPresence Software

Polycom RealPresence Software clients are downloaded to each of the desktops or laptops. These are registered via SIP to the Vodafone cloud service which activates the licensing. Public Internet access is required to complete the registration process.

Connection

Customers connect through their Enterprise Network, Wi-Fi Network or Mobile Data Plan, which must have enough bandwidth to support the number of video conferencing clients being used. Firewall and routers may need to be configured to support this platform.

Security

The customer will provide the contact details for a nominated Chairperson (email address and contact phone number). The Chairperson will be solely responsible for the meeting room and distribution of the PIN numbers within their organisation. Any notifications concerning network outages, upgrades or service issues are sent to the email address provided by the customer. For added security the pin numbers are changed every 3 months.

User Credentials

Each soft client registered to the 'cloud' service will be assigned User Credentials that will need to be entered into the Polycom software application. These credentials will be distributed to the nominated chairperson.

Training

The Chairperson will need to be available for confirmation and basic training of how to connect to the meeting room and entry/verification of the PIN number.

VideoNet™ Desktop - Quick Summary

- Utilise your organisation's existing technology by using VideoNet Desktop on your team's desktop or laptop computers.
- Increase flexibility for your team to attend meetings from the computer on their own desk or remotely on their laptop.
- Corporate-grade video conferencing environment so you never miss a meeting, even when you're working from home.

Call us about the complete VideoNet™ solution for your organisation
